

Kyvos Administrators Guide

The Kyvos Administrators Guide is for people who are responsible for managing users including roles, configuring data connections, and monitoring Kyvos status. Additionally, it covers configuring optional functionality, managing the license, system schedule and capacity, and working with registered files to identify the data for analysis.

Use the navigation in the left pane of the browser to navigate in this guide.

You should also refer to [All Users: Getting Started with Kyvos](#) to learn the basic functionality of using Kyvos.

To see the complete list of supported environments and tools, refer to the [Release Notes](#).

The major topic areas in this guide are:

- [Kyvos architectural overview](#)
- [Managing Users, Groups, and Roles](#)
- [Configuring data](#)
- [Monitoring Kyvos status details](#)
- [Resource allocation](#)
- [Configuring optional functionality](#)
- [Managing the license](#)
- [Managing system scheduling and capacity](#)
- [Monitoring system usage](#)
